CONTENTS

1. overview of compilation
   - introduction
   - why study compiler construction?
   - the fundamental principles of compilation
   - compiler structure
   - high level view of translation
   - desirable properties of a compiler
   - summary and perspective.

2. scanning
   - introduction
   - recognizing words
   - regular expressions
   - from regular expression to scanner and back
   - implementing scanners
   - advanced topics
   - summary and perspective

3. parsing
   - introduction
   - expressing syntax
   - top down parsing
   - bottom up parsing
   - building LR(1) tables
   - practical issues
   - advanced topics
   - summary and perspective

4. context - sensitive analysis
   - introduction
   - an introduction to type systems
   - the attribute - grammer framework
   - ad-hoc syntax translation
   - advanced topics
   - summary and perspective

5. intermediate representations
   - introduction
   - taxonomy
   - graphical IRs
   - linear IRs
   - static single assignment form
   - symbol tables
   - summary and description

6. the procedure abstraction
   - introduction
   - control abstraction
   - name spaces
   - communicating values between procedures
   - establishing addressability
   - standardized linkages
   - managing memory
   - summary and perspective

7. Code shape
- introduction
- assigning storage locations
- arithmetic operators
- boolean and relational operators
- storing and accessing arrays
- character strings
- structure references
- control flow constructs
- procedure calls
- implementing object-oriented languages
- summary and perspective

8. introduction to code optimization
- introduction
- background
- redundant expressions
- scope of optimization
- value numbering over regions larger than basic blocks
- global redundancy elimination
- advanced topics
- summary and perspective

9. data-flow analysis
- introduction
- iterative data-flow analysis
- static single assignment form
- advanced topics
- summary and perspective

10. scalar optimizations
- introduction
- a taxonomy for transformations
- example optimizations
- advanced topics
- summary and perspective

11. instruction selection
- introduction
- a simple tree-walk scheme
- instruction selection via tree-pattern matching
- instruction selection via peephole optimization
- advanced topics
- summary and perspective

12. instruction scheduling
- introduction
- instruction scheduling problem
- list scheduling
- advanced topics
- summary and perspective

13. register allocation
- introduction
- background issues
- local register allocation and assignment
- moving beyond single blocks
- global register allocation and assignment
- advanced topics
- summary and perspective

A. ILOC

- introduction
- naming convention
- individual operations
- an example
- control-flow operations
- representing SSA form

B. data structures

- introduction
- representing sets
- implementing intermediate representations
- implementing hash tables
- a flexible symbol-table design.
